PERSONAL SUMMARY

Software Engineering student with 2 years of academic experience in application development and current internship with a large-scale project. Excited to continue my journey as a software developer after my internship while completing my studies.

TECHNOLOGIES

FRONTEND

- React JS, Vite, Redux
- JavaScript, TypeScript
- HTML, CSS, Bootstrap

BACKEND

- C#, .NET
- Java, Springboot, RabbitMQ
- Node.js, Express.js

DEVOPS

- Docker, Kubernetes
- GitHub Actions
- Google Cloud, Azure

MACHINE LEARNING

- Python
- numPy, Pandas
- Matplotlib, SeaBorn

EDUCATION

SOFTWARE TECHNOLOGY ENGINEERING

Bachelor's degree at VIA University College
Horsens, Denmark
2023 Sep - 2027 Jan (Currently)

- Built full-stack applications with widely used programming languages
- Completed multiple semester projects and assignments
- Developed strong team collaboration skills through agile methodologies
- Designed and implemented database architectures
- Considering electives in Data Science, Cybersecurity, and Artificial Intelligence

EXPERIENCE

FULL-STACK DEVELOPER INTERN

[LeanLinking ApS](#) | 2025 Aug - 2026 Jan

Contributed to an SRM (Supplier Relationship Management) web application

- Development of frontend components using React, TypeScript, and CSS
- Worked on backend development with C#, .NET, and RESTful API
- Gained experience with Redux, AntDesign, and Locize
- Participated in an Agile Scrum environment for team collaboration

LANGUAGES

English - C1

Spanish - Native

Russian - Native

Latvia - A2

ABOUT ME

Born in Latvia and raised in Spain, I got introduced to programming in high school. After completing my studies, I pursued a Bachelor's Degree in Software Engineering at an institution in Denmark. My passion for technology is matched by my enthusiasm for sports, cars, and maintaining a healthy lifestyle. In addition, I enjoy playing chess to unwind and keep my mind sharp.

PROJECTS

- **GROWMATE (SEMESTER PROJECT 4)**

June 2025

GrowMate is a greenhouse system. I'm responsible for developing the cloud-hosted backend and implementing a machine learning model to predict plant growth. Sensor data is collected via **MQTT**, stored in a **PostgreSQL** database in the cloud, and exposed to the frontend through a **C#/.NET** API.

- **YAPPER (SEMESTER PROJECT 3)**

December 2024

Yapper intends to provide a simple social media platform. This project is a Full-Stack Application that implements **C#/Blazor** (Front-end) and **Java** (Back-end). To obtain communication between client and server, **REST API** and **gRPC** were used.

- **PHOTOGRAPHY PORTFOLIO**

December 2023

During my first semester of studies, I became curious about Front-end Development. I decided to learn **React** by deploying a Photography Portfolio. For this project, **JavaScript**, **CSS** and **Bootstrap** were used to achieve responsive layout.
